

SCHNEIDER ELECTRIC – GRADUATE ENGINEER TRAINEES

About Schneider Electric

Schneider's purpose is to empower all to make the most of our energy and resources, bridging progress and sustainability for all. We call this Life Is On.

Our mission is to be your digital partner for Sustainability and Efficiency.

We drive digital transformation by integrating world-leading process and energy technologies, end-point to cloud connecting products, controls, software and services, across the entire lifecycle, enabling integrated company management, for homes, buildings, data centers, infrastructure, and industries.

We are the most local of global companies. We are advocates of open standards and partnership ecosystems that are passionate about our shared Meaningful Purpose, Inclusive and Empowered values.

Important Information about the Schneider Electric University Program

Designation: Graduate Engineer Trainee

Business Unit: Process Automation

Compensation: INR 5,50,000 p.a. for B.Tech. for a Full-Time Role

Probation Period: For University Hires it is 6 months. During the probationary period, the services are liable to be terminated by either party, without assigning any reason by one month's notice. As part of service agreement, candidates would have to serve a minimum of 2 years in The Company; failing which, you would have to pay a sum of INR 2,00,000 to the Company

Please note that this is just an Indicative Job Description, and the selected students would be placed in either of the below roles or beyond

Job description for GET (DAT4) – Instrumentation, Chemical Engineering:

The graduate engineer trainee shall be responsible for completing all tasks assigned by the supervisor, assisting other engineers with project activities and should take initiatives and come up with original ideas. Should have a growth mindset, commitment, eager to learn and work with other team members.

Job requirements:

- Should have the basic understanding of programmable logic controllers, distributed control systems, Safety systems, Fire & Gas systems, IIoT and Industry 4.0
- Should be aware of industry standards and practices (e.g., ISA standards) that apply to control system design.
- Should have firm and increasing understanding of process control concepts and techniques.
- Should understand networking devices & components like ethernet switches, Fiber optic switches, firewalls etc.,
- Should understand the various industrial communication protocols like Modbus, Profibus, HART, FF etc.,
- Strong analytical and mathematical skills
- Strong written and verbal communication skills
- Attitude to work effectively as an individual & in team environment and shall be able to handle multiple projects simultaneously.
- A growth mindset and a commitment to lifelong learning & willingness to accept criticism
- Willing to travel for site commissioning activities depending upon the project requirements
- Maintaining a high degree of professionalism and diligence

Job responsibilities:

- Understanding project requirements and completing all duties assigned by the Supervisor.
- Participating in meetings and attending workshops and other training initiatives
- Should design, implement, and test a wide range of I/O (HART, Modbus, FF, Profibus etc.), basic control functions, interlocks, sequences, operator interface and other control components on DCS and PLC.
- Documenting the project control and safety functions, presenting them to the customer and get approval.
- Preparing simulations, test scenarios, test documentation, and participates in customer Factory Acceptance Tests.
- Actively participates in project meetings, discussion with customers, visiting sites and supporting commissioning activities
- Should be able to troubleshoot the control and communication problems between different systems during FAT and at site.
- Compiles and maintains project databases, configuration data, or other project information.

- Compiles data and prepares reports for various activities such as customer proposals, FEED studies, project design documents, FAT and SAT procedures etc.
- Shall be capable to identify technical opportunities and economic justification for control system improvements and communicates those to the Project Manager and/or Sales

Educational Qualification:

- Bachelor's Degree in Electronics & Instrumentation Engineering, Instrumentation & Control Engineering, Chemical Engineering
- Should have minimum 65% of Marks or 6.5 CGPA

Job Description for GET for REMOTE OPERATIONS.

What will you do?

- Are you a highly motivated IIoT / Automation Engineer with a passion for leveraging technology to solve complex industrial problems? If so, we want you to join our team as a GET(graduate engineer trainee). The successful candidate will be responsible for helping create solutions with our newest IIoT-based product offer & other industrial automation product line in process automation division. Solutions will be focused on various customer categories, covering End users, machine OEM (original equipment manufacturers), Process OEM. You will have an exposure to work on variety of Industrial segments such as Water/Waste water, Oil- gas (Energy) & chemicals and many others ...
- The successful candidate will work closely with TSCs, internal and external sales staff to develop solutions to help customers with their IIoT-based solutions. Effective communication skills, attention to detail, and the ability to work independently and as part of a team are essential for success in this role.

What qualifications will make you successful?

- The ideal candidate will have a bachelor's degree in Electrical Engineering, Instrumentation Engineering, Computer Engineering, Computer Science, or a similar discipline.
- You should have fair knowledge on Industrial automation products PLC / HMI/ VFD. The candidate should be well versed with IEC 61131-3 programming fundamentals and windows-based operating system.
- You should have experience / knowledge with Linux platforms such as Raspberry Pi, Beagle, or Libre, as well as knowledge of container technology (e.g., Docker) and general-purpose programming languages such as Python or C/C++/C#. You should also be a self-starter with the ability to quickly learn new technologies, programming languages, and platforms.
- Desired qualifications include experience with cloud-based infrastructures and data management in IIoT, automation systems such as SCADA, RTUs, and PLCs, and automation protocols such as MQTT, Sparkplug B, OPC UA, Modbus, DNP3, and EthernetIP. Familiarity with IT infrastructure and/or OT Security including Active Directory, Azure AD is also desirable.
- If you are a talented and motivated IIoT Automation Engineer with a background in Electrical/Instrumentation/Computer Engineering or Computer Science, we welcome you to join us in the team.

Travel: In this role, the successful candidate will be required to travel frequently across the India based on need to meet with customers and provide technical knowledge, expertise and training. The ability to travel up to 20% of the time is essential for this position basis on confirmation.

Job Description – Digital Enablement Sales Manager

Job Title	Digital Enablement Sales Manager	BU Department	Process Automation Sales
Reports to		Location	Mumbai/Gurgaon/Bangalore

Job Purpose:

Drive Digital Transformation with strategic customers by rapidly expanding our Digital Solutions portfolio, positioning ourselves as their trusted Cybersecurity advisor. Leverage expertise in cybersecurity skills to:

- Identify emerging markets and opportunities
- Develop innovative ideas and initiatives
- Enhance Digital Solutions offerings, delivering value to customers and propelling business growth

Key Roles and Responsibilities:

Employ consultative selling skills to foster strong customer relationships through:

- Regular, insightful interactions to understand customer needs and develop a robust opportunity pipeline.
- Collaborative data collection, technical feasibility evaluation, and business benefit assessment
- Driving innovative digital initiatives with customers on an ongoing basis
- Offering expert guidance on analytics, software, and services to deliver tailored digital solutions
- Creating value through collaborative workshops, co-innovation, and co-creation
- Proactive tracking and alignment of digital opportunities with all stakeholders
- Leveraging deep knowledge of digital offers, SE platforms, and tools to drive success
- Gaining a deep understanding of customers' current business challenges and priorities
- Facilitating brainstorming sessions to generate ideas and proof-of-concepts
- Jointly defining and refining POCs to ensure customer-centric solutions

Relationship Management and Communication Internally / Externally supported by this Role:

- Customer
- Marketing
- Delivery and Execution Team
- Finance
- Supply Chain Management

External / Customer Supported by This Role:

- IT / OT Vendor
- Digital and Software Partner
- Internal and External Consultants

Job Requirement and Qualification:

BE / Electrical/Instru / Chemical/Electronics

Job description for GET (DAT4) – Instrumentation / Electronics & Communication Engineering:

The graduate engineer trainee shall be responsible for completing all tasks assigned by the supervisor, assisting other engineers with project activities and should take initiatives and come up with innovative-ideas. Should have a growth mindset, commitment, eager to learn and work with other team members.

Job requirements:

- Should have basic understanding of programmable logic controllers, distributed control systems, Safety systems, Fire & Gas systems, IIoT and Industry 4.0
- Should be aware of industrial standards and practices (e.g., ISA standards) applicable to control system design.
- Should have basic understanding of process control concepts and techniques.
- Should understand networking devices & components like ethernet switches, Fiber optic switches, firewalls etc.,
- Should understand the various industrial communication protocols like Modbus, Profibus, HART, FF etc.,
- Strong analytical and mathematical skills
- Strong written and verbal communication skills
- Attitude to work effectively as an individual & in team environment and shall be able to handle multiple projects simultaneously. (I feel for GET this should not be applicable)
- A growth mindset and a commitment to lifelong learning & willingness to accept constructive feedback
- Willing to travel for site commissioning activities depending upon the project requirements
- Maintaining a high level of professionalism and diligence

Job responsibilities:

- Understanding project requirements and completing all duties assigned by the Supervisor.
- Participating in meetings and attending workshops and other training initiatives
- Should design, implement, and test a wide range of I/O (HART, Modbus, FF, Profibus etc.), basic control functions, interlocks, sequences, operator interface and other control components on DCS and PLC.
- Documenting the project control and safety functions, presenting them to the customer and get approval.

- Actively participating in project meetings, discussion with customers, visiting sites and supporting commissioning activities
- Should be able to troubleshoot the control and communication problems between different systems during FAT and at site.
- Compiles and maintains project databases, configuration data, or other project information.
- Compiles data and prepares reports for various activities such as customer proposals, FEED (Not sure if fresh engineer will understand. We can expand) studies, project design documents, FAT and SAT procedures etc.
- Shall be capable to identify technical opportunities and economic justification for control system improvements and communicates those to the Project Manager and/or Sales

Educational Qualification:

- Bachelor's Degree in Electronics & Instrumentation Engineering, Instrumentation & Control Engineering, Electrical and Electronics Engineering/ Electrical & Communication Engineering
- Should have minimum 65% of Marks or 6.5 CGPA

Job Description – GET – Execution Engineering

Job requirements:

This position will involve PLC hardware engineering, software development, FAT and site commissioning. This role will have travel requirement to customer/End-User sites across India for commissioning activities and post commissioning issues if any.

This role will also look for collaboration with various stake holders both internal and external.

Should take initiative in seeking out learning opportunities, volunteering for assignments, and participating in stretched assignments.

All required trainings and guidance will be given.

Interpersonal Skills:

- Good communication
- Inclination towards learning
- Teamwork
- Good analytical skills
- Growth mindset

Qualifications & Experience

4 Years BE/BTech/Bachelor's degree in Electronics & Instrumentation, Instrumentations and Control, Electronics and communication, Electronics and Electrical

Academically good

PC literate with experience with Microsoft Outlook, Word Excel and Power point.

Basic Exposure in PLC, DCS and instrumentation

Exposure to any SW programming is added advantage.

Digital acumen like cybersecurity, AI is added advantage.

Location of placement:

Chennai or Mumbai

Job Description –GET- Engineering

This position requires the skill sets to handle the engineering execution for projects. The scope of projects to be handled will involve Supply of DCS/Safety system, DCS/PLC/RTUs hardware engineering, software development, FAT, site commissioning and SAT. This also include interface with external stakeholders like end users, customers, vendors, consultants, and 3rd party Inspection.

This role will have travel to customer/End-User sites across India for commissioning activities and post commissioning issues if any.

This position involves approx..50% travel however same shall vary based on business requirement.

Roles & Responsibilities:

- Understanding project requirements and completing all duties assigned by the Team Lead.
- Participating in meetings and attending workshops and other training initiatives.
- Developing software system validation and testing methods.
- Applying mathematics and statistics to problem-solving initiatives.
- Applying best practices and standard operating procedures.
- Creating innovative solutions to meet our company's technical needs.
- Compile and maintains project databases, configuration data, or other project information.
- Compile data and prepares reports for various activities such as project design documents, test/validation procedures etc.
- Follow company QC process and procedure.
- Implement and adhere relevant SE policies and guidelines.

Key points:

- Strong fundamental Knowledge on Instrumentation, Electronics and communication infrastructure Customer focus, Quality deliverables and teamwork.
- Should have the basic understanding of programmable logic controllers, distributed control systems, and Networking.
- Basic understanding of Network Topology and Cyber Security principles
- Strong analytical and mathematical skills.
- Strong written and verbal communication skills. (English - must & Hindi - Preferred).
- Should Have Good Knowledge on Microsoft Office especially on Excel.
- Attitude to work effectively as an individual & in team environment and shall be able to handle multiple projects simultaneously.
- The ability to prioritize activities and deliver projects on time and within budget.
- The ability to travel as required by project requirements.
- Knowledge of Electrical wiring & Field Instruments to hook-up with the Control/Safety/PLC system
- Knowledge on VB scripting and SQL scripting will be preferred.

Qualifications - External

- B.E./B.Tech in Instrumentation & Control OR Electronics & Communication or Electrical

Job description for GET (DAT4) – Electrical, Electronics, Controls & Instrumentation:

The graduate engineer trainee shall be responsible for completing all tasks assigned by the manager, assisting other engineers with project activities and should take initiatives and come up with innovative ideas. Should have a growth mindset, commitment, eager to learn and work with other team members.

Job requirements:

- Strong technical knowledge in Electrical, Electronics & Instrumentation subjects.
- Basic understanding of electrical symbols & drawings.
- Interest to work in the area of control & automation domain.
- Willing to travel to site for commissioning activities.
- Preferred with strong analytical and mathematical skills.
- Expected with strong written and verbal communication skills.
- Willingness to work as an individual or with team environment.
- A growth mindset and a commitment to learn every day.
- Maintaining a high level of professionalism and diligence.

Job responsibilities:

- Preparation of drawings & documents, selection of components, engineering, order requisition, etc.,
- Testing & commissioning of automation, PLC, VFD and instrumentation panels.
- Actively participating in project meetings, discussion with customers, visiting sites and supporting commissioning activities
- Understanding the project requirements and complete the activities within timeline.

Educational Qualification:

- Bachelor's degree in electrical or Electronics or Electrical & Instrumentation or Control & Instrumentation Engineering,
- Should have minimum 65% of Marks or 6.5 CGPA
