

Final Year Project Proposal

Project Proposal: Student Project Teaming & Collaboration Platform

Problem Statement

Students across institutions struggle to find the right team members for academic or innovative projects due to lack of visibility into peers' interests, skills, and availability. There's also no platform that lets students discover ongoing projects and express interest to contribute, making early-stage collaboration and innovation limited.

Uniqueness Check

After reviewing the current list of approved projects, no existing project addresses this issue. While there are platforms focused on placements, roommate matching, or learning, none focus on student team formation and discovery of collaborative academic or innovation projects.

Why It Is Suitable for Final Year Project

- Real-world Relevance: Peer collaboration issues are common in universities.
- Scalable: Can expand to inter-college, startup, or hackathon team building.
- Technical Depth: Involves user auth, search/filter, dashboards, recommendation engine.
- MERN Suitability: Ideal for full-stack real-time interactive systems.
- Enterprise Potential: Could grow into a SaaS for universities and tech incubators.

Future Scope and Scalability

- Extend to host college-level and inter-college hackathons
- Feature skill endorsements, project leaderboards
- AI-based smart team suggestions
- Internship/startup collaborations
- T&P integration for showcasing best student portfolios
